

The Babraham Institute provides unique research facilities of national importance. These have been developed with signi cant investment from the BBSRC. Next Generation Sequencing technology has revolutionised post-genomics studies of gene expression, genetic regulation and nuclear dynamics. Its exibility allows almost any genetic material to be studied on a genome-wide scale. The Facility provides library quality control and sequencing services for the Babraham Institute and external companies, o ering a variety of sequencing solutions for di erent project sizes and a broad range of applications.
